

APPENDIX 11.10
COUNCIL CONSULTATION

Appendix- 11.10 Council Consultation

Email Correspondence

From: Connor Rusby
Sent: 30 June 2020 17:13
To: Chris Cockburn
Subject: RE: Hounslow 2019 Air Quality Monitoring Data

Hey Chris,

Thanks for your time earlier, and apologies for calling out the blue. Thanks for sending over the 2019 concentrations.

See attached the scoping opinion received previously, as mentioned it outlines the importance of undergoing consultation with the council with respect to the verification and methodology. Would be great to run through with WYG when they are available, if possible could we organise a Microsoft teams call so I can screen share and run through a few items visually, happy to set this up and put something in the calendar to suit their availability.

Kind regards,

Connor Rusby

Subject: RE: Hounslow 2019 Air Quality Monitoring Data

**** External Email ****

Hi Connor,

Thanks for your call and sorry for not getting back to you yesterday. Please see the bias-adjusted annual mean NO₂ concentrations for the two sites below. I have included 2018 and 2019.

Annual mean NO ₂ concentration (µg m ⁻³)		Year	
Site ID	Site Name	2018	2019
HS67	Busch Corner	48.4	50.5
HS68	Junction of Commerce Road	36.5	37.0

As I mentioned I'll get in touch with WYG and see if they are able to give you a call this week.

Kind regards,

Chris Cockburn | Environmental Strategy Officer

Subject: RE: Hounslow 2019 Air Quality Monitoring Data

Morning Chris,

Thanks for your prompt response. Will check back in a few weeks for the full ASR.

If possible would you be able to send over the 2019 annual mean concentrations for sites HS67 and HS68? These are the two sites we are hoping to use for verification purposes. I have attached a map of the site locations just for reference.

Thanks again,

Connor Rusby

Good morning Connor,

I can confirm that our ASR for 2019 has been sent to Defra for appraisal and that we're currently awaiting feedback and approval from Defra/the GLA. When we have received this we will publish the report online at the address you have linked below. The submission deadline was the end of May 2020 so we are hoping for a response soon.

In the meantime if there is anything else I can help you with please let me know. If you need monitoring data for a specific site/set of sites or time period please let me know which and I would be happy to send it over to you.

Kind regards,

Subject: FW: Hounslow 2019 Air Quality Monitoring Data

Good afternoon,

Hope you are keeping well.

Buro Happold have been appointed to carry out an air quality assessment on a development within the London Borough of Hounslow. I was hoping to review the latest ASR however clicking on the link to the 2019 assessment on this [webpage](#) leads to an error page.

Has the annual status report for the monitoring year 2019 been published yet? I know they are usually published around June, however with everything going on I can imagine this may not be the case this year! If a full ASR is not available, would you be able to send the monitoring data as a stand-alone file?

Thanks in advance for your assistance, and enjoy your weekend!

Kind regards.

Figure 11-5 Council consultation

02/07/20 Meeting

- 11.1. Following the above email correspondence, a meeting was organised with the councils appointed air quality and noise consultants, WYG. Peter Henshaw (BuroHappold- Senior Air Quality Consultant), Connor Rusby (BuroHappold- Air Quality Consultant) and Nigel Mann (WYG- Director of Noise, Air Quality, Lighting and Odour) were present at this meeting.
- 11.2. The methodology of the report was presented to WYG, with particular emphasis on the

verification process. The modelled outputs from the ES chapter were presented and compared with results from the councils existing model and the concentrations predicted at similar locations were comparable across the most impacted areas of the project site.

- 11.3. The choice of background concentrations to be used in the assessment was also discussed. Background concentrations from Defra background maps were used for the baseline (2019) scenario and it was agreed the same background concentrations were to be used in future scenarios in the interest of a conservative assessment.
